EMCO BUILDING PRODUCTS USES THE WORLD'S MOST RECYCLED MATERIAL

Ninety-five to 100% of steel and aluminum is recycled globally, and the life expectancy is far greater for steel and aluminum products compared to most other materials such as vinyl, wood or fiber cement. Steel siding and aluminum soffit and rain carrying systems are 100% recyclable at the end of a long useful life. On job sites, steel and aluminum material waste is easily separated and recyclable. We strive to manufacture products that promote a healthier environment for all. From the stringent eco-guidelines followed by our paint line to our commitment to using recycled steel and aluminum, EMCO Building Products keeps moving forward with the environment.

Recycling steel and aluminum on a job site is also compensated by the value given when recycling. In addition, due to the incredible long life and documented durability, steel siding is aesthetically pleasing and makes an attractive investment. EMCO Building Products is focused on promoting and supporting our environment in all that we do. We are committed to finding ways that we can lead the industry in reduced environmental impact.
